Southeast Rock Groundwater Contamination Site  
Superfund/Technical Reports

Dear Mr. Wehrmann:

The Illinois Environmental Protection Agency (Illinois EPA) is in the process of Remedial Design (RD) and Remedial Action (RA) for the four source areas described in the Southeast Rockford Groundwater Contamination (SERGC) Site Record of Decision (ROD) signed in June 2002. Illinois EPA as part of the RD and RA would like to utilize already existing Illinois State Water Survey (ISWS) groundwater monitoring wells and incorporate them into the Illinois EPA's groundwater monitoring network for the site. To do this it will be necessary for Illinois EPA to reconfigure some of the wells for access. This reconfiguration will probably involve removal and replacement of the cover and installation of a riser on some wells changing those wells from flush mounted wells to above ground mounted wells. Illinois EPA will replace the locks and maintain the wells as part of the RA for the entire site and will inform the ISWS of which wells it intends to modify. As part of the RD/RA process Illinois EPA would like to perform this work in the 2005 construction season in order to reassess groundwater conditions in the SERGC site. Illinois EPA appreciates the cooperation by the ISWS and looks forward to working with you again.

If you have any questions, please feel free to contact me at 815-223-1714 or Terry Ayers at 217-524-3300.

Sincerely,

A handwritten signature in black ink, appearing to read "Thomas C. Williams". The signature is fluid and cursive, with a large initial "T" and "W".
